VKP

VoIP Virtual Keypanel

The RTS **VKP** (VoIP Virtual Keypanel) is a Windows-based application that allows any user to have a fully functioning RTS Digital Matrix intercom user station on their PC. The Virtual Keypanel application connects via the PC's Ethernet connection to any path that can support standard IP protocols, including LAN, WAN, and VPN.

The RTS Virtual Keypanel application is compatible with any RTS Digital Matrix intercom equipped with the RVON interface. The Virtual Keypanel brings a new level of enterprise-wide and remote access to your RTS Digital Matrix intercom system.

Features

- Using the same **VoIP** (Voice over IP) technology as the RVON cards, the VKP is compatible with any RTS Digital Matrix intercom system equipped with either RVON-8, RVON-16, RVON-C, or RVON-I/O interfaces.

- The RTS VKP has three (3) standard interface skins: CLD Lever Key, Classic Lever Key, and Classic Pushbutton.

- Convenience with VKP running under Windows, no special dedicated hardware is required. The same PC that runs your general purpose applications, such as spreadsheets, word processors, and AZedit, can simultaneously function as a matrix keypanel.

- Worldwide connections remote communications using VKP and a compatible computer, RTS Digital Matrix intercom communications can be accessed from anywhere in the world that an IP-compliant LAN connection can be made.

- Program updates can be downloaded to the PC hosting the VKP client.

- Multilingual character sets the VKP supports standard English and Japanese Kanji character sets.
