

Eclipse Software for Mac OS X

Mapping software for Mac allows Ethernet equipped units to control Cubase, Final Cut Pro X, Logic Pro, Media Composer, Premiere Pro, Nuendo and any other Mac software applications.

It provides context-sensitive Jog/Shuttle and user control of text displays and user mapping of controls in any software.

Our smart software driver knows which application is in the foreground and switches automatically for seamless control.

Enhanced support for Eclipse 24, Eclipse MXL/MXL2 and Eclipse MX make the Eclipse Midnight Series the most powerful programmable controller series for Mac.

Eclipse PX - Surround Panning Joystick Controller

Eclipse PX combines a high-quality, three axis joystick with five touch-sensitive, push-button, rotary encoders, nine illuminated buttons and a three digit white LED display for indicating track number.

The controller can be connected to a computer, using its own built in 10/100 Ethernet interface (TCP/IP and UDP supported) or to some other Eclipse units via internal expansion port. It can be physically attached to other Eclipse units using Eclipse Joiner Kit.

Eclipse PX is functionally identical to the Nuage Panner and can be used to directly control surround mixing in Steinberg Nuendo and other applications.

With its own custom software plug-in for Steinberg Nuendo, Eclipse PX provides precise control of all automatable surround automation parameters.

Controls include real time control and automation of Joystick X, Y, Global Divergence, Auto Orbit, Front Divergence, Rear Divergence, Center Distribution, Front-Rear Divergence, LFE Level, Manual Orbit and more.

Software developers can take advantage of the Eclipse PX as a stand alone unit or combine it with other Eclipse components to make a specialized controller for your specific needs.

Eclipse PX is also compatible with Pro Tools (Mac Only) and Logic Pro.

Direct support in Dolby ATMOS Tools 1.6.
