4K/HD Ultra High Frame Rate Camera System

HDC-4800 4K Baseband Processor BPU-4800

SUPER MOTION

Open Up a New World of Live Production Shooting

The HDC-4800, combined with its dedicated BPU-4800 4K Baseband Processor, delivers breathtaking 4K Ultra HD images at up to 8x (479.52 fps)/4x (239.76 fps) slow motion^{*1} or Full HD at up to 16x (959.04 fps)/8x (479.52 fps) slow motion^{*2} and features Full HD cutout and zoom capabilities. Used on its own, the HDC-4800 delivers 4K Ultra HD standard speed images or Full HD at up to 4x slow motion with outstanding high sensitivity as standard.

This all-in-one, fully networked 4K live ultra-high frame rate recording and playback system will be a game changer for broadcasting live events as well as live sports action.

*1 Optional SZC-4008 software is required.

*2 Optional SZC-2016 software is required.

New 4K Imager for Live Sports and Multi-Camera Productions

The HDC-4800 has a new sophisticated Super 35 mm CMOS sensor with a global shutter system that lets the camera take full advantage of PL mount lenses. You'll enjoy stunning 4K images that capture fast-moving sports with incredible definition. For extra operational convenience, there's a motorized dual ND/CC filter that can be operated remotely for variable exposure control. It also provides support for B4 lenses via a supplied adaptor for HD production.

You can capture the dynamic excitement of live sports in 4K Ultra slo-mo with the HDC-4800, together with its dedicated 4K baseband processor, the BPU-4800. You can also shoot full-resolution 4K Ultra HD images at up to 8x or Full HD at 16x to reveal split-second action.

This all-in-one solution for ultra-high frame rate recording and playback makes it easier for broadcast production personnel to deliver the superb slo-mo coverage of sports and other live events that TV viewing audiences love.

Share Play: Efficient File Sharing Function over IP Networking

The Share Play function can be utilized when the system is configured with the PWS-4500 server connected to the HDC-4800 together with the BPU-4800 via the network.

Once clips have been recorded by the BPU-4800, the Share Play function enables these clips to be shared among all connected PWS-4500 servers. This delivers a more efficient workflow. For example, PWS-4500 server operators and highlight operators can view the clips in the BPU-4800, and can playback and output any of these clips from their own local server. There is no need to push or pull clips between different servers.

*An optional PWSK-4505 BPU Share Play Board is required to be installed in the PWS-4500.

Replay Function

Optional Accessories

Using just the HDC-4800 and BPU-4800 along with control devices*, you can create a powerful replay server system with intuitive GUI operation that includes slow-replay control, highlight editing, and touch-panel capabilities.

*The PWSK-4403 Control Panel, the PWS-100PR1 Production Control Station, and the PWS-110MG1 Media Gateway Station are required for the replay system.

HD Cutout Function

Powerful processing allows a Full HD high frame rate (HFR) image to be cut out from a 4K picture in real time. During replay, any portion of the captured image can be cropped to provide a close-up HD HFR image. This gives directors a powerful editorial tool to enrich live sports coverage with detailed analysis of the action.

Camera Test Charts

HDLA-1500/1505/1507 Large Lens Adaptor

Adapter Plate

To incorporate a lens support when mounting a longer, heavier lens, you can attach the Vocas BP-18 19 mm Balance Plate to the HDC-4800 by fixing the Vocas Adapter Plate (item code: 0490-0030) under the camera.

Upgrade Software
